## Bladder Accumulators

EBV - ELG from 20 to 80 bar

ENGINEERING YOUR SUCCESS.

# Main Features

## Operation principle

Operation of the Parker Olaer gas loaded bladder accumulator is based on the considerable difference in compressibility between a gas and a liquid, enabling a large quantity of energy to be stored in an extremely compact form. This enables a liquid under pressure to be accumulated, stored and recovered at any time. Its special design allows the bladder (the strategic component) to compress the gas and usually form into three lobes in order for the accumulator to store, then to deliver the fluid under pressure, as required.

<b>V<sub>0</sub></b> = Nitrogen capacity of the accumulator	<b>P<sub>0</sub></b> = Initial preload of the accumulator
<b>V<sub>1</sub></b> = Gas volume at the minimum hydraulic pressure	<b>P<sub>1</sub></b> = Gas pressure at the minimum hydraulic pressure
<b>V<sub>2</sub></b> = Gas volume at the maximum hydraulic pressure	<b>P<sub>2</sub></b> = Gas pressure at the maximum hydraulic pressure
<b>ΔV</b> = Returned and/or stored volume of working fluid between P <sub>1</sub> and P <sub>2</sub>	

**A** - Bladder in the pre-charge position, which means that it is only filled with nitrogen. The anti-extrusion system perforated bushing closes the hydraulic orifice and prevents the destruction of the bladder. *Maximum pressure differential (P<sub>2</sub>/P<sub>0</sub>): 4:1*

**B** - Position at the minimum operating pressure ; there must be a certain amount of fluid between the bladder and the hydraulic orifice, such that the anti-extrusion system does not close the hydraulic orifice. Thus, P<sub>0</sub> must always be < P<sub>1</sub>.

**C** - Position at the maximum operating pressure. The volume difference  $\Delta V$  between the minimum and maximum positions of the operating pressures represents the working fluid quantity.

## Your Benefits

For flows greater than 130 m<sup>3</sup>/h in the networks, the EBV accumulator absorbs overpressures and compensates for pressure reductions generated by fast valve closures.

### For example:

- Unleaded gasoline network
- Maximum network pressure = 10 Bar
- Feed : three 130 m<sup>3</sup>/h pumps at 4 Bar
- Valve closure in 3s.

### Results:

- Without accumulator: P<sub>min</sub> = -1 Bar / P<sub>max</sub> = 14 bar
- With EBV accumulator 100-40/90 01180  
P<sub>min</sub> = 2.5 bar / P<sub>max</sub> = 8 Bar

### The pre-charge pressure must NOT exceed 20 bar

When starting pumps on a pressurised network, the overpressure generated by “putting the fluid mass into circulation” is compensated by the EBV accumulator. The EBV and ELG accumulator ranges conform with the new EC regulations.

## Technical Characteristics

The accumulator comprises of a pressure vessel including valve stem device, a rubber bladder and an anti-extrusion system.

- Shell material options include alloyed steel, stainless steel, aluminium, titanium and composites.
- Various bladder materials available which are compatible with a range of fluids and temperatures.
- Anti-extrusion system; perforated bushing.

Taking into account the different needs of various applications, Parker Olaer offers different protections external and/or internal: Bare metal, nickel plating, epoxy paint, PTFE, Rilsan® and phenolic coating. This extensive range enables us to offer accumulators operating from - 40 to +130°C with pressures of up to 80 Bar and capacities of up to 575 litres. ATEX versions are also available for some accumulators in fluid groups 1 or 2 as per Article 9 section 2.1 and 2.2 of PED.

As the market leader in bladder type accumulators, Parker Olaer has participated in the development of the EN 14359:2006 standard, which specifies the material, design, manufacturing, fatigue tests, safety devices and documentation (including the instruction manual), for pressure accumulators and gas bottles for hydraulic applications.

# How to size?

OLAER has developed software to design accumulators to absorb the shock. You can use two different procedures to evaluate and to find a shock absorber solution with guaranteed results\*.

\*(complete procedure and send this to Parker Olaer)

	Procedure
	Complete      Partial
• Pressure readings and validation of assumptions on site	_____ <input checked="" type="checkbox"/> <input type="checkbox"/>
• Shock absorber calculation starting from a correctly filled in questionnaire with isometric drawing (supplied by you)	_____ <input checked="" type="checkbox"/> <input checked="" type="checkbox"/>
• Validation of calculations on site by pressure readings after installation of the selected accumulators	_____ <input checked="" type="checkbox"/> <input type="checkbox"/>

**Flanges**

Capacity of Accumulator	K	K
	PN 20 DN 40 1 1/2" ANSI 150 lbs	PN 50 DN 40 1 1/2" ANSI 300 lbs
EBV 0.5 to 5 L	22	25
EBV 10 to 50 L	28	37
EBV 100 to 575 L	142	151

Other capacities consult Parker Olaer.

**Charging Sets**

The charging sets are an indispensable instrument for the verification, pressurization and nitrogen bleeding of most of the hydraulic accumulators available on the market. To use this unit, it is screwed on the gas charging valve of the accumulator and connected via a high pressure hose to the nitrogen source, equipped with a pressure regulator. If only the nitrogen pressure is to be controlled or reduced, this hose is not necessary.

**An Olaer pressure regulator - sold separately. It is mandatory to install a pressure regulator between the bottle or any nitrogen source and the charging set.**

**Model VG3**

The standard set is delivered in a storage case containing the following:

- pressure gauge with standardized graduations in bar
- vent valve
- 3 connection adaptors for charging valves. (7/8" - 5/8" - 8V1).
- High pressure hose, 2.5 m length, in standard, maximum working pressure 400 Bar. This hose is fitted at each end with a female swivel coupling G 1/4" BSP for connecting to the inflation port. It can be connected to a commercial nitrogen bottles, in this case add an adapter on one end view model in the country. For the other destinations consult Parker Olaer.
- Operating instruction french/english version

**Note:** On request, the following options are available :

- Pressure gauge with different scale divisions : 63 mm with glycerol bath back end G1/4" BSP equipped with direct gear for Minimess® connection. To scale divisions 0-10,0-60 with accuracy class 1.6%.
- High pressure hose of different length with adaptors for nitrogen bottles from various countries are available (specify country)

**Model VGU**

The standard set is delivered in a storage case containing the following:

- VGU universal tester and pressurizer (end M28 x 1.50).
- Pressure gauge kit from 0 to 25 bar.
- Pressure gauge kit from 0 to 250 bar.
- Connection adaptors for inflation valves (7/8" - 5/8" - 8V1 - M28 x 1.50).
- High pressure hose, 2.5 m long, for connecting to a nitrogen source.
- Hexagon socket screw key 6 mm.
- Jackets of replacement joints.
- Operating instruction in French, English, German.

**Note:** On request, the following options are available:

- Pressure gauge kits with different scale divisions: 63mm with glycerol bath back end G1/4" cyl. equipped with direct gear for Minimess® connection. Scale divisions 0-10, 0-60 with accuracy class 1.6%.
- High pressure hose of different length with adaptors for nitrogen bottles from various countries (specify country), at each end with a female swivel coupling G1/4" for connecting to the inflation port.

**Maximum working pressure: Maximum charging pressure: 20 bars for the EBV range.**

Gasoline	- 5 + 115	01130
Lead free gasoline	- 20 + 130	01180
Other fluids	Other temperatures	Please contact Parker Olaer

\* standard construction

in Bar at 20 °C, limited to 20 Bar maximum at the maximum working temperature

Blind: with blind connector or with reduction connector (refer to dimension I on the overall dimensions page 8 and specify the connection) or with flange (refer to the flange line on the dimensions page 8 and specify the type).

## ORDERING THE ELG ACCUMULATOR

State the designation of the ELG accumulators mentioned in the table in page 4 “plumbing” (other constructions on request)

**Nitrogen gas pressure** in bar at 20 °C, limited to **20 bar maximum** at maximum working temperature. Refer to the plumbing sector section.

## ORDERING ACCESSORIES AND PERIPHERAL MATERIALS

Indicate the designation of accessories mentioned in the tables in pages 5 and 6 and the accessories on page 7 and 8.

## HOW TO ORDER THE REPAIR KIT

Example: For an EBV accumulator 100-40/90 01180  
 KIT EBV 100-40/90 01180

Item	Spare parts
1	Spare Parts Kit
2*	Bladder Assembly
3*	Gas valve
4*	Valve cap
5*	Snap ring
6*	Sealing ring
7*	Bushing assembly

\* These components are delivered in the spare parts kit

# Regulations

## Codification Table

Destination	Regulation	Parker Olaer Regulation Code	Comments	
Europe	CE	90	-	Approval is based on the directive PED 97/23/CE rules. The CE marking will be apposed on the product for Pressure Vessel risk category >= L.
USA	ASME	15	Based on ASME VIII div 1 without appendix 22	This regulation is based on the design code ASME VIII div 1. The Appendix 22 defines special requirements for the case of integrally forged pressure vessels.
		48	Based on ASME VIII div 1 with appendix 22	
China	SELO	88	Based on CE	This regulation is only applicable for pressure vessels which maximum working pressure $\geq 0.1$ MPa and maximum working pressure (Mpa) X volume (L) $\leq 2.5$ MPa.L.
Canada	CRN	92	Based on ASME VIII div 1 app 22	Approval is based on ASME VIII div 1 design code. Others countries as example Alaska require a CRN registration. Also, each province and territoire of Canada has its own CRN rules. So, thank you to indicate the concerned province for quotation.
Australia	AS1210	83	Based on CE	Australian regulation is applicable for pressure vessels which maximum working pressure (MPa) X volume (internal volume in L) $\geq 30$ Mpa.L in size.
		91	Based on ASME VIII div 1 app 22	
Japan	JIS	95	Based on ASME VIII div 1 app 22	Approval is based on ASME VIII div 1 design code (version 1998) and taking into account specific corrosion allowance value. JIS is applicable only for pressure vessels which internal diameter is higher than six inches.
Brasil	NR13	AA	Based on CE (AD-2000)	NR13 regulation is only applicable for pressure vessels which maximum working pressure (KPa) x internal volume (m3) $\geq 8$ .
		AE	Based on ASME VIII div 1 app 22	Also, technical documentation packaging must be established and joined to the equipment.
		AM	Based on CE (EN14359)	A special marking has to be done on the pressure vessel according to NR13 requirements.
Russia	GOST R	71	Based on CE	Certificate (CTR) must be established and joined to the equipment for delivery. Technical passport could be established if customer requires it.
		AU	Based on ASME VIII div 1 app 22	
Marine-Offshore	DNV	24	Based on CE	The marine and offshore applications have to respect some kind of classifications associated to third party (Notified body). This classification is often decided by the owner of the installation. All classification companies give almost the same approval process (design and manufacturing assessment). So, to see in details if the scope of these severals marine approvals are compatible with your application, please contact PARKER OLAER for accurate quotation.
	BUREAU VERITAS MARINE	11		
	ABS	41		
	LLOYDS REGISTER SHIPPING	10		
	GERMANISHER LLOYDS	73	-	
	RINA	26	Based on CE	
	DRILLING SYSTEMS	-	-	
France	NUCLEAR	90	-	Approval is based on RCCM design code and dedicated only to France market. For other countries out of France, ASME III div 1 is more recognized for nuclear plant activities.
Europe & Asia	NUCLEAR	AZ	Based on ASME III div 1	Approval is based on ASME III division 1, mainly on subsection NC for components class 2.

\* For these specific regulations (and/or) if your destination is not mentioned in this table, please contact PARKER OLAER for further information.

### Multi-Regulations codification examples\*

Codification	Regulation
90 EX	CE+ATEX
94	CE+ASME
88	CE+SELO
86	CE+ASME+SELO

How to include the correct regulation in your order?

Accu denomination example:

EBV 20-40 /XX

\* For other regulations, please contact directly Parker Olaer.

# Approvals

This table is giving an indication of approval availability for EBV series. Availability is to confirmed for each approval, in particular the pressure rating and the allowable working temperatures.

## Installation

**Position:** Preferably vertical (liquid connection downwards) to horizontal, depending upon application. If the accumulator is installed in any position other than vertical with fluid port down, contact Parker Olaer. The accumulator could have reduced volumetric efficiency and Parker Olaer can help you to take these factors into account.

**Mounting:** A 200mm clearance is required above the accumulator to allow for gas charging. Each accumulator is delivered with a user instructions leaflet.

**Nitrogen gas pressure:** If not specified, the accumulator will be delivered with a storage pressure between 2 and 5 Bar.  
 Safety instruction : Never precharge accumulator at a precharge pressure exceeding **20 Bar** at maximum working temperature.
