Pneumatic Rotary Actuators

Series PRO - PRN

Catalogue PDE2502TCUK April 2011

ENGINEERING YOUR SUCCESS.

Rotary actuators are an efficient and easy way to generate torque from compressed air, in a very compact size. They are ideal for the compact applications in a wide range of industries such as, packaging, process, electronics etc.

Wide range

A full range of 9 sizes is available, the 8 largest sizes are single or double vane type (with double effective torque). For the PRN High Torque, a series of customized cushion units (CRN) are available for high energy applications.

Easy-to-use oscillating angles

Two oscillation reference points of 45° and 90° and three oscillating angles of 90° 180° and 270° are featured on the PRN ranges to match the most frequently uses. On the PRO range, the oscillation angle can be adjusted to the exact requirement.

Stable operation

The unique sealing design minimises leakages. It assures low speed oscillation and stable, smooth operation even at low operating pressures and speeds.

Durability to high operating temperatures

Dry dehumidified air may supply the rotary actuators within operating temperature range of -5°C to 80°C (PRN range -5°C to +60°C).

Outstanding durability

A solid vane shaft and built-in damper are combined with a unique sealing design to ensure outstanding durability. PRN50 and higher models are able to operate much greater loads with the incorporation of a Hydro-cushion.

Important !
 Before attempting any external or internal work on the actuator or any connected component, make sure the actuator is vented and disconnect the air supply in order to ensure insolation of the air supply.

Note !
Air quality is essential for maximum cylinder life (please refer to ISO 8573).

Note !
All technical data in this catalogue are typical data only.

! WARNING

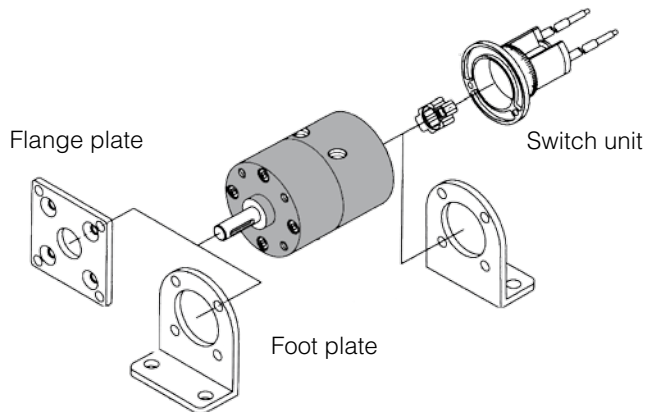

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

SALE CONDITIONS

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered into by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

PRO Miniature Rotary Actuators (adjustable oscillating angle)

Vane	Model	Effective torque (N.cm at 6 bar)
Single vane	PROA3S	38
	PROA10S	120
	PROA20S	210
	PRO30SE	410
Double Vane	PROA3D	86
	PROA10D	254
	PROA20D	470
	PRO30DE	950

Refer page 4

PRN Miniature Rotary Actuators (fixed oscillating angle)

Vane	Model	Effective torque (N.cm at 6 bar)
Single vane	PRNA1S	15,6
	PRNA3S	38
	PRNA10S	120
	PRNA20S	210
	PRN30SE	410

Pneumatic Rotary Actuators - Series PRO - PRN

PRO Miniature series - Adjustable oscillating angle - Order Codes

Standard models

Order code	Torque at 6 bar (N.cm)	Oscillating angle
Single vane		
PROA3S-0-90	38	30 to 180°
PROA10S-0-90	120	30 to 180°
PROA20S-0-90	210	30 to 180°
PRO30SE-0-45	410	30 to 270°
Double vane		
PROA3D-0-45	86	30 to 90°
PROA10D-0-45	254	30 to 90°
PROA20D-0-45	470	30 to 90°
PRO30DE-0-45	950	30 to 90°

How to select a PRO rotary actuator ? Refer page 28

Note : Rotary actuators with variable oscillating angle are shipped with fixed reference point stopper. The angle setting stopper is attached but not fixed. This must be fixed securely before use.

Oscillation starting point and oscillation angle

PROA3S, PROA10S, PROA20S
Oscillating reference point at 90°

PRO30SE
Oscillating reference point at 45°

PROA3D, PROA10D, PROA20D, PRO30DE
Oscillating reference point at 45°

Rotary Actuator mountings

For Rotary Actuator	Flange mounting	Foot mounting
PROA3S/D	PRN3-P	PRN3-L
PROA10S/D	PRN10-P	PRN10-L
PROA20S/D	PRN20-P	PRN20-L
PRO30SE/DE	PRN30-P	PRN30-L

The mountings are provided with set screws

Switch units

Variable switch position, solid state NPN or PNP. Refer to page 5 for technical data.

For Rotary Actuator	NPN	PNP
PROA3S/D	FR-3PRO	FP-3PRO
PROA10S/D	FR-10PRO	FP-10PRO
PROA20S/D	FR-20PRO	FP-20PRO
PRO30SE/DE	FR-30PRO	FP-30PRO

Protective cover and stopper unit

For Rotary Actuator	Protective cover	Stopper unit
PROA3S/D	PRO3-K	RO3-U
PROA10S/D	PRO10-K	RO10-U
PROA20S/D	PRO20-K	RO20-U
PRO30SE/DE	PRO30-K	RO30-U

Maintenance kits

The maintenance kit consists in the vane shaft, shoe seal and shaft O'rings

For Rotary Actuator		Double vane	
Single vane			
PROA3S	PRNA3S-PS	PROA3D	PRNA3D-PS
PROA10S	PRNA10S-PS	PROA10D	PRNA10D-PS

Operating pressure	bar	2 to 7	2 to 7	2 to 10	2 to 10
Operating temperature	°C	-5 to 80	-5 to 80	-5 to 80	-5 to 60
Maximum operating frequency	cycles/mn	150 (at 180°)	150 (at 180°)	120 (at 180°)	90 (at 270°)
Internal volume	cm³	4	12	21	43
Allowable radial load	N	40	50	300	400
Allowable thrust load	N	4	4	25	30
Allowable energy	mJ	1	2	3	7
Weight	kg	0,085	0,170	0,280	0,510

PRO Rotary Actuators	Unit	PROA3D	PROA10D	PROA20D	PRO30DE
Vane		Double vane			
Air condition		Filtered (5µ) lubricated or non-lubricated			
Oscillating angle	°	30 to 90	30 to 90	30 to 90	30 to 90
Oscillating reference point	°	45	45	45	45
Port size		M5	M5	M5	G1/8
Minimum operating pressure	bar	0,7	0,7	0,6	0,8
Operating pressure	bar	2 to 7	2 to 7	2 to 10	2 to 10
Operating temperature	°C	-5 to 80	-5 to 80	-5 to 80	-5 to 60
Maximum operating frequency	cycles/mn	240 (at 90°)	240 (at 90°)	180 (at 90°)	180 (at 90°)
Internal volume	cm³	2,8	8,1	15	34
Allowable radial load	N	40	50	300	400
Allowable thrust load	N	4	4	25	30
Allowable energy	mJ	1	2	3	7
Weight	kg	0,087	0,180	0,290	0,530

Notes :

- The allowable energy differs from that of PRN series.
- Maximum operating frequency is given at 5 bar operating pressure (unloaded).
- Make sure to use the PRO rotary actuators within the allowable energy. Check if the required energy is lower than the allowable energy. If not, use end stoppers directly on the load.
- The PRO with keyways are provided with keys.

Materials specification

PRO	PROA3, PROA10, PROA20	PRO30
Body	Aluminium alloy	Aluminium alloy
Solid vane shaft	Steel + resin + Hydr. Nitrile	Steel + resin + Nitrile
Shoe	Resin	Resin
Shoe seal	Hydrogenated Nitrile	Nitrile
O-ring	Hydrogenated Nitrile	Nitrile
Screws, claw, stoppers, locknut	Steel	Steel

Switch units specification

Switch unit type	FR-	FP-
Application	Relay, PLC, IC circuit	
Output method	NPN	PNP
Mounting	Switch position adjustable	
Operating voltage	DC5~30V	DC10~30V
Operating current	5 to 200mA	5 to 200mA
Indicating lamp	Lights up at ON	
Consumption	20mA at 24V	14mA at 24V 10mA at 12V 7mA at 12V 4mA at 5V
Max.leakage current	10 µA	
Internal voltage drop	1,5 V	
Average operating time	1 ms	
Shock resistance	490m/s²	
Operating temperature	5 to 60°C	
Protection	IP67	
Lead wire	1 m, 3 core, oil resistant	
Response range	23°±7°	
Hysteresis	Approx. 2°

PRO Miniature series - Adjustable oscillating angle - Technical data (cont)

Oscillating time range

Note : The PRO rotary actuators must be operated within the range of the charts shown; otherwise, they exhibit a stick-slip motion.

Setting the oscillation angle

The rotary actuators are delivered with the reference point stopper fixed and the angle setting stopper non fixed. The angle setting stopper has to be set in position according to the angle required, it can be attached at intervals of 15°.

Oscillating angle setting and external stopper specifications

Model n°	PROA3S	PROA10S	PROA20S	PRO30SE	PROA3D	PROA10D	PROA20D	PRO30DE
Oscillation angle setting range	30 to 180°	30 to 180°	30 to 180°	30 to 270°	30 to 90°	30 to 90°	30 to 90°	30 to 90°
Oscillating reference point	90°	90°	90°	45°	45°	45°	45°	45°
Minimum angle setting	30°	30°	30°	30°	30°	30°	30°	30°
Maximum angle setting	180°	180°	180°	270°	90°	90°	90°	90°
Pitch for angle setting	15°	15°	15°	15°	15°	15°	15°	15°
Fine adjustment range								
Angle	-9° to +6°	-9° to +6°	-9° to +6°	-9° to +6°	-9° to +6°	-9° to +6°	-9° to +6°	-9° to +6°
Oscillating ref point	±3°	±3°	±3°	±3°	-1° to +3°	±3°	±3°	±3°
At max angle setting	-9° to +6°	-9° to +6°	-9° to +6°	-9° to +3°	-9° to +1°	-9° to +3°	-9° to +3°	-9° to +3°

PRO Miniature series - Adjustable oscillating angle

Setting the oscillation angle (cont.)

When the angle setting equals the stopper mounting pitch (15°)

1. Place the stopper into the tapped hole corresponding to the intended angle and fix it. When mounting the stopper, use the angle setting marks provided every 30°, near the tapped hole.

2. Then, rotate the fine adjust screws on the reference point stopper and the angle setting stopper until the correct angle is obtained. After completing the angle setting, the locknut must be tightened.

Angle fine adjustment range :

Refer to the table page 6.

Switch mounting orientation

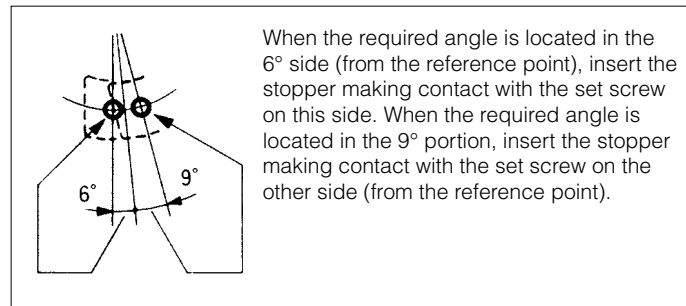

The 2 types of switches (-3L and -3R) included in the switch unit have to be oriented in accordance to the table and diagrams herebelow :

Oscillating angle	Orientation of switches
30° to 186°	A
187° to 270°	B

When the angle setting lies between two 15° stops

1. When the required angle lies between two 15° stops, fix the stopper into the tapped holes as shown in the diagram herebelow.

When the required angle is located in the 6° side (from the reference point), insert the stopper making contact with the set screw on this side. When the required angle is located in the 9° portion, insert the stopper making contact with the set screw on the other side (from the reference point).

2. Then, rotate the fine adjust screw fitted to the stopper to obtain the required angle. After completing the angle setting, the locknut must be tightened.

Setting the switch position

Mount the switch unit on the body using the set of screws. For clamping torque, refer to the table below

Model	Clamping torque (N.cm)
PROA3S/D	6 to 10
PROA10S/D	10 to 20
PROA20S/D and PRO30SE/DE	20 to 30

Adjusting the switch position

Loosen the switch adjust screws, make the point, at which the highest sensitivity is obtained, match with the angle marking equivalent to the actuator setting, and retighten the switch adjust screws torque of 40 to 50 N.cm. Since the angle markings are provided just for reference, make a final adjustment by checking if the LED is on.

Replacing the switch

To remove the switch, remove the switch adjust screws and plate clamp screw. To mount a switch, reverse the procedure for removal. Adjust the switch position after completion of mounting.

PRO Miniature series - Adjustable oscillating angle - Dimensions (mm)

PROA3S

PROA3D

With protection cover

With foot plate mounting

Note : A foot plate can be fitted turned by steps of 60° from the original position

With flange plate mounting

Note : A flange plate can be fitted turned by steps of 120° from the original position

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRO Miniature series - Adjustable oscillating angle - Dimensions (mm)

PROA10S

PROA10D

With protection cover

With foot plate mounting

Note : A foot plate can be fitted turned by steps of 60° from the original position

With flange plate mounting

Note : A flange plate can be fitted turned by steps of 120° from the original position

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRO Miniature series - Adjustable oscillating angle - Dimensions (mm)

PROA20S

PROA20D

With protection cover

With foot plate mounting

With flange plate mounting

Note : A foot plate can be fitted turned by steps of 90° from the original position

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRO Miniature series - Adjustable oscillating angle - Dimensions (mm)

PROA30SE & DE

With protection cover

With foot plate mounting

With flange plate mounting

Note : A foot plate can be fitted turned by steps of 60° from the original position

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRN30DE	0,07 - 0,70	0,14 - 1,40	0,21 - 2,10

Note : Operate the PRN rotary actuators within the range of duration mentioned in the above charts. Otherwise, the rotary actuator may move in stick-slip motion.

Switch mounting orientation

The 2 types of switches (-3L and -3R) included in the switch unit have to be oriented in accordance to the table herebelow :

Oscillating angle	Orientation of switches
30° and 180°	A
270°	B

Setting the switch unit

Mount the switch unit on the body using the set of screws. For clamping torque, refer to the table below :

Model	Clamping torque (N.cm)
PRNA1S /D	20 to 30
PRNA3S/D	20 to 30
PRNA10S/D	20 to 30
PRNA20S/D	20 to 30
PRN30SE/DE	20 to 30

Adjusting the switch position

Loosen the switch adjust screws, make the point, at which the highest sensitivity is obtained, match with the angle marking equivalent to the actuator setting, and retighten the switch adjust screws at a clamping torque of 40 to 50 N.cm. Since the angle markings are provided just for reference, make a final adjustment by checking if the LED is on.

Replacing the switch

To remove the switch, remove the switch adjust screws and plate clamp screw. To mount a switch, reverse the procedure for removal. Adjust the switch position after completion of mounting.

PRN Miniature series - Dimensions (mm)

PRNA1S/D

With foot plate mounting

Note :
 A foot plate can be fitted turned by steps of 90° from the original position.
 Short shaft side : Example with 2 pcs.

With flange plate mounting

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRN Miniature series - Dimensions (mm)

PRNA3S/D

With foot plate mounting

Note :

A foot plate can be fitted turned by steps of 90° from the original position.
Short shaft side : Example with 2 pcs.

With flange plate mounting

Note :

A flange plate can be fitted turned by steps of 120° from the original position

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRN Miniature series - Dimensions (mm)

PRNA10S/D

With foot plate mounting

Note :

A foot plate can be fitted turned by steps of 60° from the original position.
 Short shaft side : Example with 2 pcs.

With flange plate mounting

Note :

A flange plate can be fitted turned by steps of 120° from the original position.

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRN Miniature series - Dimensions (mm)

PRNA20S/D

With flange plate mounting

With foot plate mounting

Note :

A foot plate can be fitted turned by steps of 90° from the original position.
Short shaft side : Example with 2 pcs.

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

PRN Miniature series - Dimensions (mm)

PRN30SE/DE

With flange plate mounting

With foot plate mounting

Note :

A foot plate can be fitted turned by steps of 90° from the original position.
 Short shaft side : Example with 2 pcs.

With switch unit (variable switch position)

Note : For switch unit-mounting hardware combinations, refer to the required dimensions in each fig.

Dimensions (mm)

PRN High Torque range with Hydro-cushion - Dimensions (mm)

PRN with hydro-cushion

Type	A	B	C	D	E	F	G	H
PRN50	136,5	30	20,5	56	50	54,0	R38	34
PRN150	159,5	34	22,5	80	62	71,5	R51	46
PRN300	187,5	37	25,5	95	87	96,0	R68	62
PRN800	244,0	42	31,0	130	118	135,0	R78	90

PRN with hydro-cushion and switch unit

Type	A	B	C	D
PRN50	137,7	87,2	50,5	R58,2
PRN150	160,7	104,2	56,5	R72,2
PRN300	188,7	126,2	62,5	R88,2
PRN800	244,0	174,2	69,8	R118,5

Note :

Refer on page 23 for the dimensions of the standard PRN model

For switch unit mounting hardware or hydro-cushion combinations, refer to the required dimensions in each fig.

Selecting a pneumatic Rotary Actuator

Step 1 : Selecting the size of the Rotary Actuator

When a simple static force is required (such as clamping force)

1. Determine the required force, arm length from actuator and operating pressure.

Required force F(N)
 Arm length from actuator l (m)
 Operating pressure P(bar)

2. Calculate the required torque

$T_s = F \times l$ (N.m)
 Required force F(N)
 Arm length from actuator l (m)

3. Compare the effective torque T_h of the actuator under the operating pressure with the required one T_s .

Select a rotary actuator with : $T_h > T_s$

Refer to the tables :

PRO : page 5
 PRN miniature : page 13
 PRN high torque : page 21

When a the load is moving

The required torque for moving a load is the total of resistance torque and acceleration torque.

The resistance torque is the sum of friction, gravity and external force and torques.

The acceleration torque is provided to accelerate the load to certain speed against inertia.

1. Calculating the resistance torque T_r

a) Determine the resistance force, arm length from actuator and operating pressure.

Required force F(N)
 Arm length from actuator l (m)
 Operating pressure P(bar)

b) Calculate the resistance torque T_r

$T_r = k \times F \times l$ (N.m)

k : margin factor k = 2 when there is no load variation
 k = 5 when there is a load variation

Note : When there is a load variation, if $k < 5$, the angular velocity increases and thus smooth operation cannot be obtained

2. Calculating the acceleration torque T_a

a) Determine the oscillating angle θ and oscillating time t. Oscillating time is the time required for the vane to operate from starting point to the oscillation end.

Oscillating angle θ (rad) 90° = 1.5708 rad
 180° = 3.1416 rad
 270° = 4.7124 rad

Oscilating time t (s)

b) Calculate the moment of inertia

The moment of inertia is determined from the shape and the mass of the load.

Moment of inertia J (kg.m²)

c) Calculating angular acceleration

$\alpha = \theta / t^2$ (rad/s²)

θ (rad) : Oscillating angle
 t (s) : Oscilating time

d) Calculating acceleration torque T_a

$T_a = 5 \times J \times \alpha$ (N.m)

J : Moment of inertia of the load (kg.m²)

α : Angular acceleration (rad/s²)

3. Calculating the required torque T_s

$T_s = T_r + T_a$ (N.m)

T_r : Resistance torque (N.m)

T_a : Acceleration torque (N.m)

4. Compare the effective torque T_h of the actuator under the operating pressure with the required one T_s .

Select a rotary actuator with : $T_h > T_s$

Refer to :

PRO: p 5, PRN miniature: p 13, PRN high torque: p21

Calculating the resistance torque	Horizontal load	Vertical load
Required	<p>Load resistance exists</p> <p>External force</p>  <p>Balanced load Unbalanced load</p>	<p>Load resistance exists</p> <p>External force</p>  <p>Balanced load Unbalanced load Gravity</p>
Not required	<p>No load resistance exists</p> <p>Balanced load Unbalanced load</p> 	<p>No load resistance exists</p> <p>Balanced load</p> 

Selecting a pneumatic Rotary Actuator (cont.)

Step 2 : Checking the oscillating time

Check if the oscillating time is within the specification of each model. Refer to the pages :

PRO :	page 6
PRN miniature :	page 14
PRN high torque :	page 21

Step 3 : Checking the allowable energy

On the inertia matter, use the rotary actuator so that the inertial energy is lower than the allowable energy of the rotary actuator. Check as indicated here after :

1. Calculate the angular velocity ω

$$\omega = \theta / t \text{ (rad/s)}$$

θ (rad) :	Oscillating angle
t (s) :	Oscillating time

2. Calculate the inertial energy of the load E

$$E = 1/2 \times J \times \omega^2 \text{ (J)}$$

J :	Moment of inertia of the load (kg.m ²)
ω :	Angular velocity (rad/s)

3. Check if the inertial energy E is within the allowable energy indicated in the specifications of each actuator.

PRO :	page 5
PRN miniature :	page 13
PRN high torque :	page 21

Note :

If the inertial energy exceeds the allowable energy, the actuator may be damaged. Therefore, it is necessary to take the following measures :

- Select a larger size the allowable energy of which is higher than the energy required
- Slow down the oscillating time
- Use a hydro-cushion CRN (high torque PRN)
- Fit a cushion or other shock absorber directly on the load side.

Selecting a hydro-cushion CRN

1. Calculate the moment of inertia by the shape and mass of the load, and make sure that it is within the allowable energy of the hydro-check

2. Make sure that the collision angular velocity is less than the maximum allowable (refer to the table page 25)

$$\omega_0 = 1,2 \times \omega \text{ (°/s)}$$

ω : Mean angular velocity (°/s)

3. Calculate the collision energy from the load and the collision angular velocity

$$E1 = 1/2 \times J \times \omega_0^2 \text{ (J)}$$

J : Moment of inertia (kg.m²)

ω_0 : Collision angular velocity (rad/s) 1° = 0.0174 rad

4. Find the energy generated from the torque of the actuator

$$E2 = 1/2 \times T \times \theta \text{ (J)}$$

T : Torque of the rotary actuator (N.m)

θ : Absorbtion angle of the cushion (one side)

refer to page 25 (rad)

5. Check that E1 + E2 is equal or less than the maximum absorbstion energy

(table page 25)

6. Find the energy per minute from the operation frequency

$$Em = 2 \times N \times (E1+E2) \text{ (J/mn)}$$

N : operation frequency (mn)

7. Make sure that Em is equal or less than the maximum energy capacity per mn (table page 25)

Reference data for selecting HI-ROTOR

Calculating the moment of inertia

Shape	Sketch	Requirement	Inertia moment I (kgcm ²)	Radius of gyration	Remarks
Disc		Diameter d (cm) Mass m (kg)	$I = m \cdot \frac{d^2}{8}$	$\frac{d^2}{8}$	
Stepped disc		Diameter d ₁ (cm) Diameter d ₂ (cm) Mass portion d ₁ m ₁ (kg) Mass portion d ₂ m ₂ (kg)	$I = m_1 \cdot \frac{d_1^2}{8} + m_2 \cdot \frac{d_2^2}{8}$	-	When portion d ₂ is much smaller than portion d ₁ , value of d ₂ is negligible.
Bar (with rotating center at the end)		Bar length l (cm) Mass m (kg)	$I = m \cdot \frac{l^2}{3}$	$\frac{l^2}{3}$	If the ratio of the bar width : length is over 0.3, use formula for rectangle.
Rectangular parallelepiped		Side length a (cm) Side length b (cm) Distance between the center of gravity and rotation l (cm) Mass m (kg)	$I = m \cdot (l^2 + \frac{a^2+b^2}{12})$	$l^2 + \frac{a^2+b^2}{12}$	
Bar (with rotating center at the center)		Bar length l (cm) Mass m (kg)	$I = m \cdot \frac{l^2}{12}$	$\frac{l^2}{12}$	If the ratio of the bar width : length is over 0.3, use formula for rectangle.
Rectangular parallelepiped		Side length a (cm) Side length b (cm) Mass m (kg)	$I = m \cdot \frac{a^2+b^2}{12}$	$\frac{a^2+b^2}{12}$	
Concentrated load		Shape of concentrated load Disc Diameter of disc d (cm) Arm length l (cm) Mass of concentrated load m ₁ (kg) Mass of arm m ₂ (kg)	$I = m_1 \cdot l^2 + m_1 \cdot K_1^2 + m_2 \cdot \frac{l^2}{12}$ Case of disc $K_1^2 = \frac{d^2}{8}$	K_1^2 : Select from above this column	If m ₂ is much smaller than m ₁ , assume m ₂ to be 0 for calculation.

How to convert the inertia of load applied through gears "I_L" for HI-ROTOR's shaft

Gear		Gear HI-ROTOR side a Load side b Inertia moment of load I _L (kgcm ²)	Inertia moment of load HI-ROTOR's shaft $I_H = (\frac{a}{b})^2 I_L$	-	When a large gear is required, it is necessary to take inertia moment of gear into consideration.

Rotary Actuators - Common instructions

Installation

Warning

The Rotary Actuators should be installed according to the rules of safe use of compressed air and the general rules relating to systems, especially the European Machinery Directive.

Do not apply excessive stress to the shaft.

1. Heavy thrust load should be avoided

When the thrust load is higher than the allowable thrust load prescribed in the specifications, please use a bearing as shown in fig. 1.

2. Heavy radial loads should be avoided

When the radial load is higher than the allowable radial load prescribed the specifications, please use flexible coupling as shown in fig. 2.

3. Check the allowable energy

If the impact energy is higher than the allowable energy, use a CRN hydro-cushion or external stoppers operating directly on the load.

Do not hit the shaft when the body is fixed or the body when the shaft is fixed.

When mounting a load or couplings on the shaft, set the rotary actuator in such a way that the body does not receive any force, as shown in the Fig. 3.

Lubrication

Caution

The rotary actuators listed in this catalogue operate non-lubricated.

This product is design to be used with non-lubricated air, however, they may be used with or without lubricated air. When used with lubricated air, this must be continued as the original lubricant may have run off, which could result in operation failure.

When using a lubricant, Class 1 turbine oil ISO VG32 (containing additive) is recommended. Do not use spindle oil and machine oil, that may damage the seals.
